Top DSA Questions asked in amazon interviews.

Your Amazon interview is next week and you haven't touched these questions

Amazon doesn't ask random questions.

01. They resuse the same patterns every cycle

02. Master these 5 and you've covered most of the loop.

Swipe through. **Save it for prep day.**

Array & Two Pointers

The warm-up that quitely filters people out

01. Two Sum

02. Trapping Rain Water

03. Container with Most Water

Why it Matters?

Amazon loves these as openers. Miss the optimal approach and the interview slides downhill fast.

Sliding Window

The pattern that hides in plain sight

01. Longest Substring Without Repeating Chars

02. Minimum Window Substring

03. Container with Most Water

Why it Matters?

Once you see the window, these go from hard to easy.
Most people brute-force them and run out of time.

Trees & BST

Where most interviews actually live

01. Level Order Traversal

02. Lowest Common Ancestor

03. Validate a BST

Why it Matters?

Amazon goes deep on trees. Recursion clarity is what they are really testing, not memorised code.

Graphs

The round that separates senior from junior

01. Number of Islands

02. Course Schedule (Topo Sort)

03. Word Ladder

Why it Matters?

BFS / DFS show up constantly. Number of Islands alone is one of Amazon's most-asked questions.

Dynamic Programming

The one everyone fears (you don't have to)

01. Coin Change

02. Longest Common Subsequence

03. Word Break

Why it Matters?

You don't need 100 DP problems. You need to recognise the few patterns these three cover.
